Boss Closures

BOSS BORE SEAL—3/STR

Boss Closures is pleased to present its patented tamper evident HDPE 38mm Bore Seal Milk Closure made specifically to work efficiently with its patented new milk bottle neck design allowing the neck to be captured within the closure eliminating leaks.

This closure is specifically designed to be:-

- Lightweight
- Elimination of leaks
- Fully Recyclable
- Low Cost
- Suitable for lighter weight bottles
- Compatible with current sizes and capping methods.

Boss Closures has a **patented** angled neck finish which is captured within the bore seal of the closure. The neck design allows for a reduction in bottle weight as less plastic is utilised to strengthen the neck as the cap now provides all the sealing strength required. The unique design reduces the **head loads** required to apply the cap and achieve a leak proof seal which allows the weight and strength in the bottle and neck to be reduced. This provides an opportunity to **reduce the cost** of the bottle.

Boss Closures

BOSS FOIL SEAL—3/STR

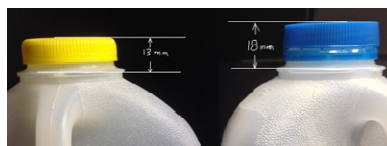

Boss Closures unique bore seal when used with a foil seal both assists with the seating of the foil for sealing and provides a secondary seal after removal of the foil retaining ALL the benefits of the primary bore seal option.

Without a requirement to provide a secondary seal to seal the bottle after foil removal the Boss Closures bore seal option **reduces the cost** of a foil seal option.

The same neck design can be used with a foil option requiring no changeover costs to the bottler. The Boss Closure assists with the seating of the foil on the landing area and in providing a leak proof seal.

The cap is available with or without a tamper evident band.

If required Boss Closures can provide a dust proof cap, which provides NO SECONDARY SEAL.

Boss Closures

BOSS LDPE—8/STR

For customers requiring a standard 8 start bore seal Boss Closures provides a range of 8 start options.

Our standard 8 start LDPE bore seal is available for all applications including milk and juice in HDPE bottles.

Our unique high speed manufacturing process allows us to offer these standard closures at a lower cost.

BOSS PETSEAL—8/STR

Boss Closures offers a range of bore seal options for PET bottles. Options are available in LDPE and HDPE material with a bore seal suitable for both warm and hot fill.

These closures are available in 8 start, 3 start and 2 start threads.
